

Accelerated Wealth Course

This is a course designed to develop skills in accelerated wealth creation. Utilising charting and technical analysis to recognise opportunities, entries and exits and assist with risk minimisation.

It is designed for beginners with little or no prior knowledge of shorter term investing and trading. This is not a day traders course however much of the information could be applied in that field as well.

It is designed to help you make money when the markets are going up, down or even sideways.

This is not a sales pitch disguised as an educational course like many so called “get rich quick” schemes currently available. There are no other costs on top of the course fee.

See over the page for session content descriptions.

Presented by: Malcolm (Mal) Tew

DipFp, DipTA, DipSup, DipFS(MB), AASFA
